Repairing The Past  
Powering The Future

## THE RELAY TEST BOX MK2

### Automated Relay Testing for Safe And More Efficient Operations

The automated Relay Test Box MK2 is a purpose-built solution designed to test Clifford and Snell D2900 & D2600 series relays quickly, accurately, and with minimal manual intervention. It replaces traditional manual testing methods with an automated process that delivers consistent, repeatable results.

Find out more at:

The key benefits of the Relay Test Box MK2 include significant time and cost savings, improved accuracy, and enhanced reliability. The unit is portable, easy to use, integrates seamlessly into existing systems and operates as a standalone piece of equipment. It also supports adaptability, with the ability to test a variety of relay types through interchangeable modules—making it a future-proof investment for efficient and safe operations.

# THE RELAY TEST BOX MK2

## Currently tests Clifford and Snell (C&S) D2900 & D2600 Relays

### The Relay Test Box MK2 can:

---

Detect coil position and voltage, AC or DC

---

Detect diodes and their orientation

---

Detect relay function, such as:

- ✓ *Standard operation*
- ✓ *Latching*
- ✓ *Electrical reset*
- ✓ *Mechanical reset*
- ✓ *Timer*
- ✓ *Delayed release*

---

Detect contact position and function

---

Determine operating and release time

---

Determine operating and release voltage

---

Measure contact resistance

---

Electrically clean contacts

---
