Repairing The Past
Powering The Future

Like Technologies is a specialised engineering company that provides electronic hardware and software solutions, primarily for the nuclear industry and other critical sectors.

Based in Halton, near Lancaster, we are a small, "close-knit" team, known for being highly supportive of early-career talent and those looking to enter the electronics field.

Why Choose Like Technologies?

Unlike a massive company where you might be "just a number," a placement here offers:

Direct Mentorship: You work alongside experienced hardware and software engineers who are "happy to teach the fundamentals."

High Impact: You contribute to real projects for major organisations in the nuclear industry.

Culture: Known for a friendly environment with perks like an early Friday finish and ongoing training including degree apprenticeships.

Like Technologies aren't just looking for technical skill; they look for aptitude and attitude.

Problem Solvers: People who enjoy taking things apart to see how they work.

Local Talent: We work with local schools, colleges, universities and skills bootcamps to uncover talent across Lancashire and Cumbria.

Precision: Working in the nuclear and power sectors means "near enough" isn't good enough—attention to detail is vital.
